

Hex

Mounting Instructions

Your Hex is designed for mounting to a variety of wall surfaces. Because of the wide variation of mounting surface construction, specific mounting hardware is included. For the most secure mounting, fasten the Hex to as many wall studs as possible. Ghent recommends using #8 pan head type self-tapping screws (provided). When wall studs cannot be used, we recommend using expandable type wall anchors.

Installation involves securing a cluster of wall mounts to a wall, each with 1 screw.

STEP 1: Decide which orientation you wish to hang the Hex, scribe a mark on the wall where the middle of your first Hex will be located.

STEP 2: Install the provided screw into the wall at the scribed mark. Sink screw into the wall until the provided shoulder makes contact with the wall. A screwdriver can be used to adjust the screw in or out to allow for a better fit.

STEP 3: Use the included installation fixture to mark the location of the next Hex location(s). Repeat steps 2 & 3 until all Hex are marked. (Reference below illustration)

STEP 4: Attach Hex onto the installed screws. Insure the hex are fully seated on the screw.
