"J" Hanger Mounting Instructions

TOP "J" HANGER

BOARD

MOUNTING SCREWS
(Not Included)

BOTTOM "J" HANGER

1. Select the desired height from the floor to the bottom of the board and draw a level line on the wall. If the board is to be mounted on a studded wall, locate the studs and fasten the bottom hangers firmly to the wall with your fasteners (not included) at the top of the hanger slot. Mount a hanger to a wall stud in the "J" position. If the board is to be mounted on other than a studded wall, select the appropriate fastener from your nearest hardware supplier. Locate a hanger 6" from each end and space apart as needed.

2. Place the board into the mounted hangers and check level. Slip the remaining hangers (upside down) behind the top of the board. Position the top hangers directly over the bottom hangers. Mark their positions with a pencil. Remove the board from the bottom hangers and loosely fasten the top hangers in the marked position with one fastener (not included) through the top of the slot of each hanger.

3. Gently guide the board up into the top hangers sliding them to their uppermost position according to the illustration. This should permit the bottom frame to clear the lip of the bottom hangers. With the board against the wall, let it drop firmly down into the bottom hangers. With one hand holding the board top against the wall, press the hangers down over the frame.
